

Poncho replant restrictions – know the label

Chris DiFonzo, PhD, MSU Department of Entomology

If a corn-field planted with Poncho-treated seed suffers damage and needs to be replanted, the label does have some important plant-back restrictions. These restrictions hold true for both Poncho 250 (low rate) and 1250 (rootworm rate). Many growers have not read or do not recall getting a label with their Poncho-treated seed, so this may come as a surprise.

Corn, canola, rape-seed: immediate replant

Cereal grain, grasses, non-grass animal feeds, SOYBEAN, DRY BEANS: 30 DAYS

All other crops: one year!

To get a copy of the Poncho label, visit this web site:
